- March 2019
- July 2019
- August 2019
- November 2019

Background

HIV/AIDS infection in the city of São Paulo, follows the national tendency:
 Segments which are more exposed to HIV/AIDS: Homosexuals and other men who have sex with other men, Transgender people, sex workers and people who use drugs.

Description

DST/AIDS PM decided to first implement in services further away from the city center and, in a pioneering way, also in Testing and Counseling Center. There was training of the teams and relocation of medical professionals to expand the supply.
 In addition, communication materials were produced to disseminate PrEP.

Recommendations

- Expand PrEP's access to the most vulnerable populations and priority populations
- Expand extramural activities
- Peer education

Communication

Lessons Learned

More than **4.000** People Registered in PrEP

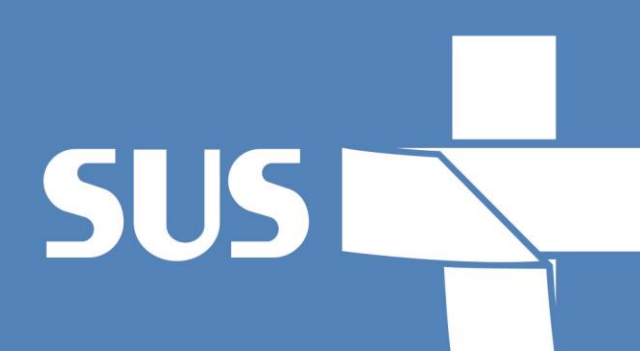

41% of wich are Black

200 Preventive Agents that promote PrEP

Network of Partners: saunas, bars, nightclubs and sex parties
